Gaming Publishers: Financial Health Overview

Capcom vs. Take-Two vs. Ubisoft: Financial Overview, FY2023–2026

Year

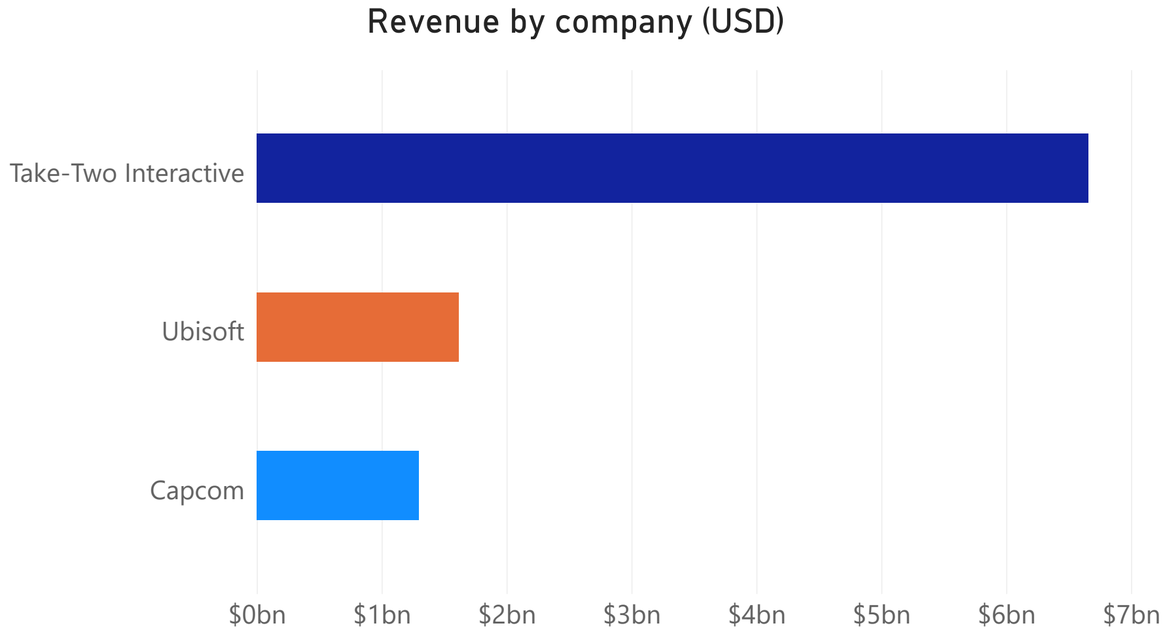

- ○ 2023
- ○ 2024
- ○ 2025
- ◉ 2026

Company name

- ◉ Capcom
- ○ Take-Two Interactive
- ○ Ubisoft

Revenue USD	Net margin	Free Cash Flow margin
$1.3bn	27.94%	8.74%

Current ratio	ROE
4.59	20.39%

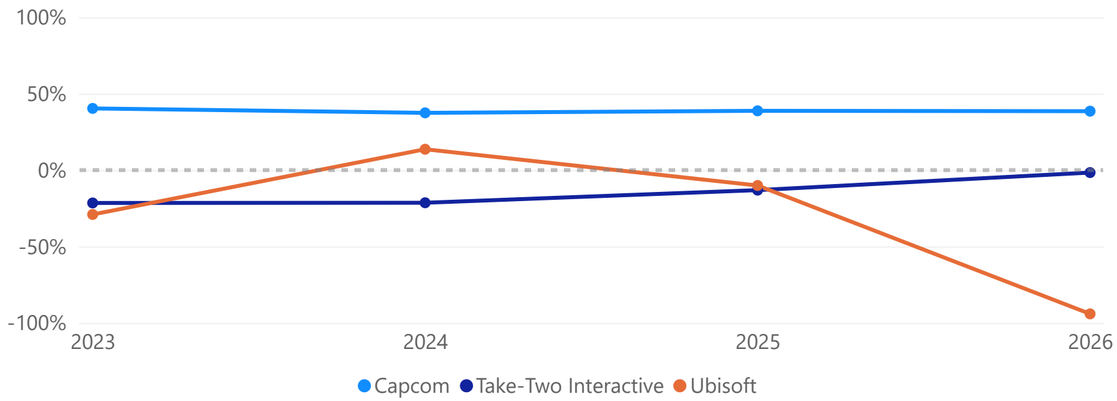

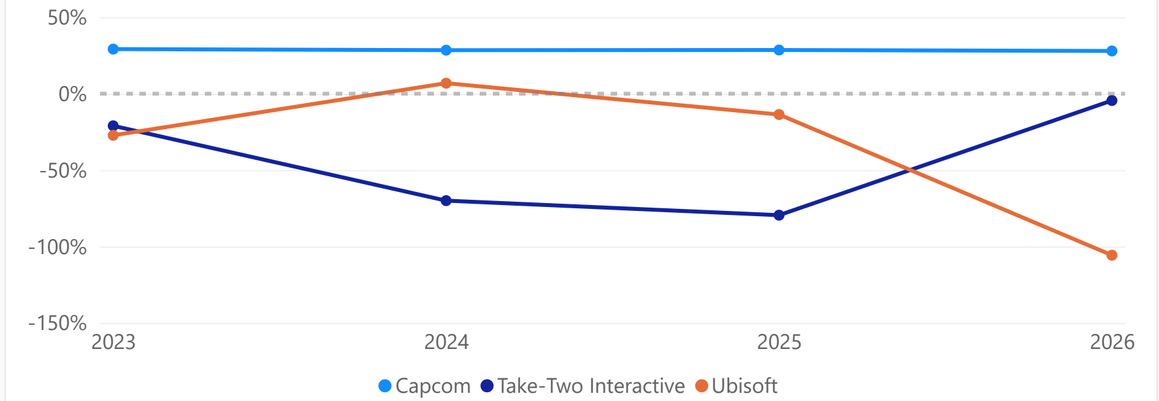

Key findings (FY2026)

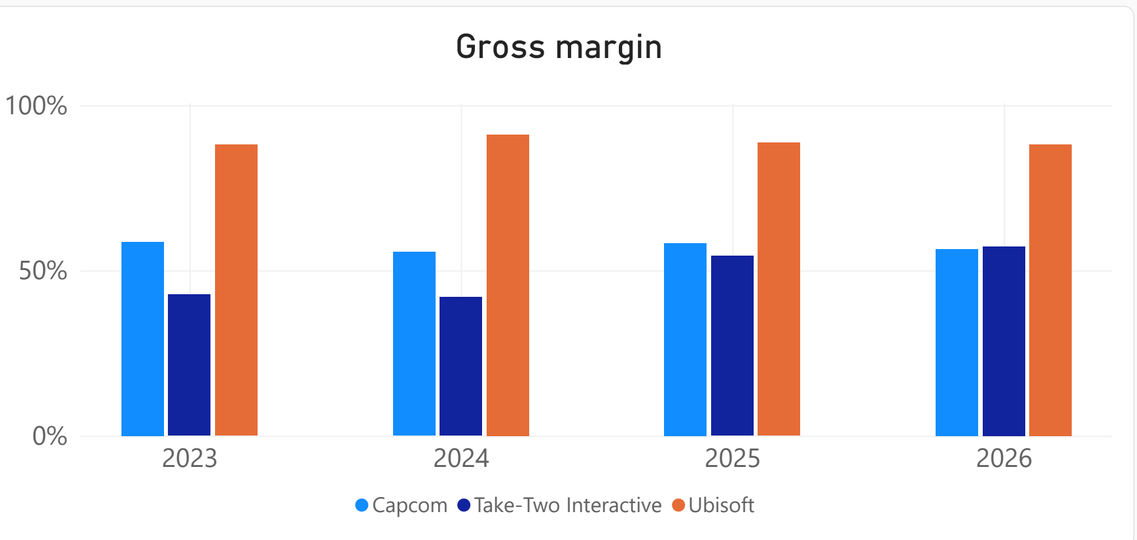

Capcom is consistently profitable (28% net margin), holds far more cash than debt, and has grown revenue every year. Take-Two is the largest publisher ($6.7bn revenue) and is recovering from write-off-driven losses, with operating margin now near break-even. Ubisoft's revenue has fallen two years in a row, its 2026 loss exceeded its remaining equity, and it carries significant net debt.

Profitability

How Much Revenue Turns Into Profit

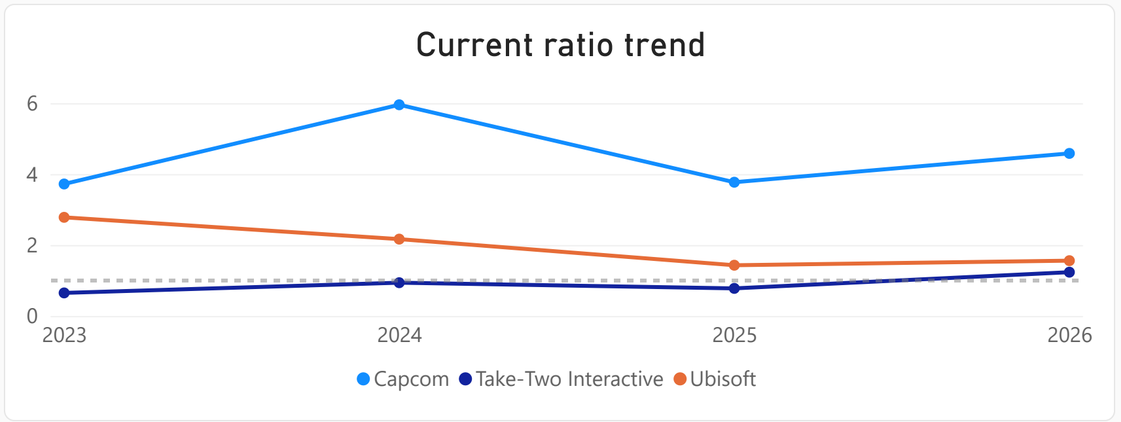

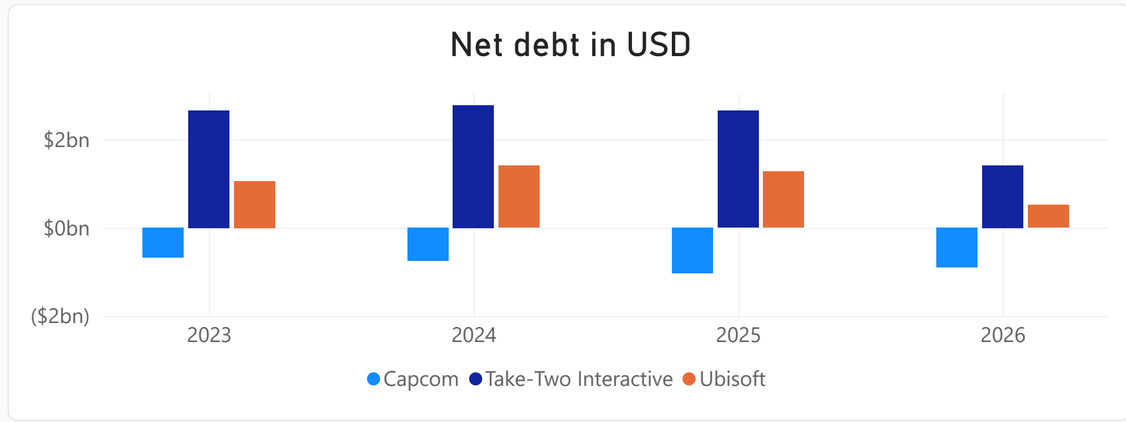

Note on gross margin

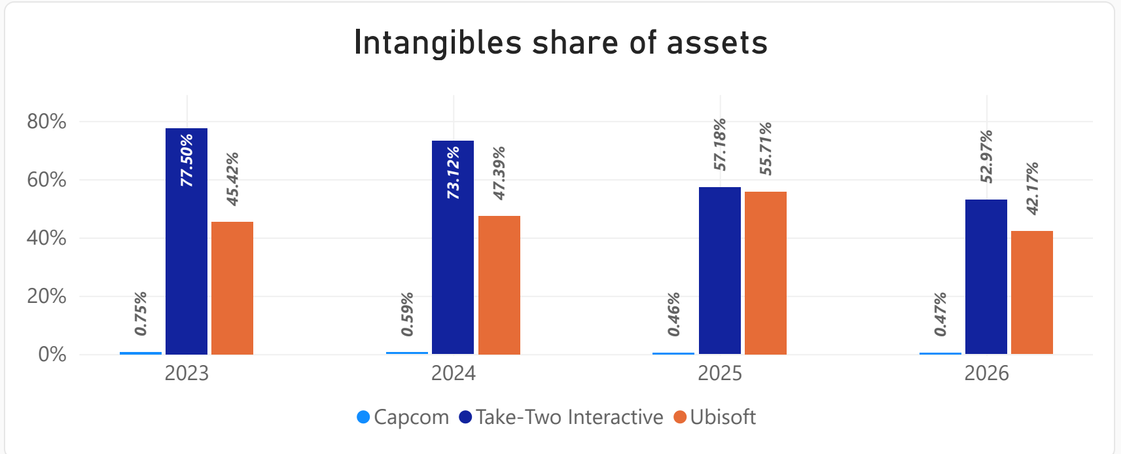

Gross margin isn't comparable across these companies: each classifies development and platform costs differently. Ubisoft's ~89% gross margin doesn't mean it's more efficient than Capcom; operating and net margin are the fairer comparisons.

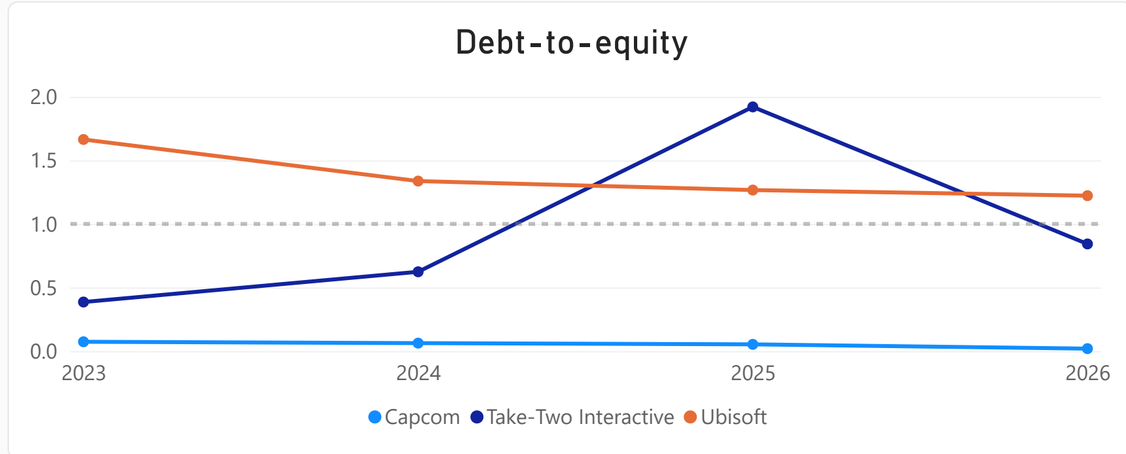

Liquidity & Leverage

Can They Pay Their Bills, and How Much Do They Owe?

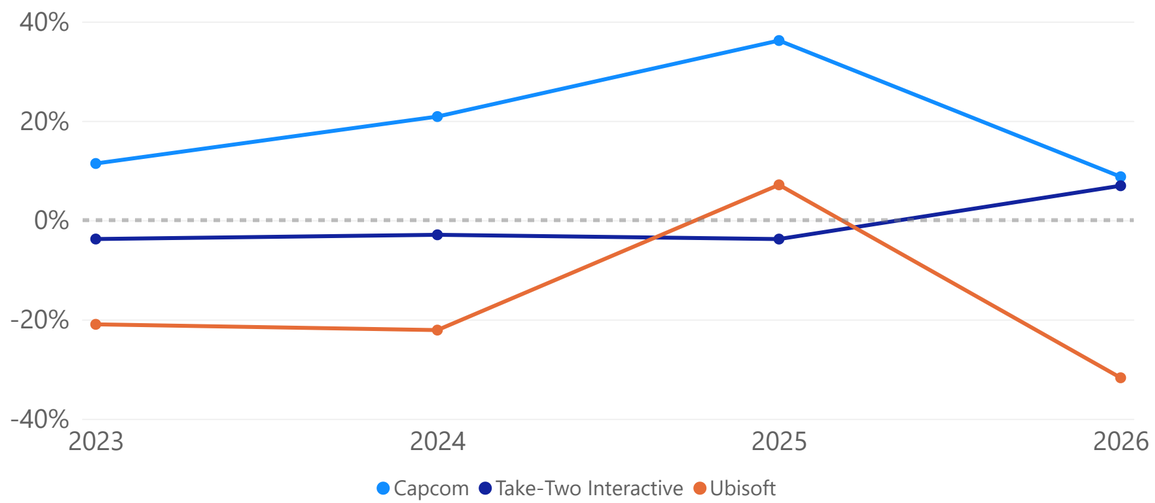

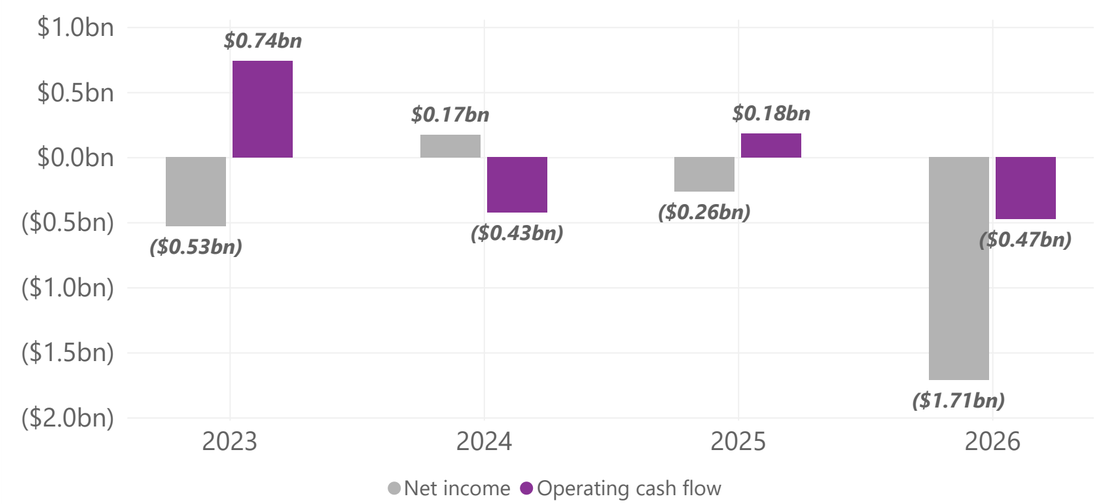

Note on liquidity & leverage

Net debt = total debt − cash; negative values mean net cash. Capcom's current ratio is partly boosted by games in development, which Japanese accounting records as current assets; its cash ratio (above 2 in every year) confirms its strong position regardless.

Cash Flow

Are the profits backed by real cash?

Note on Cash Flow

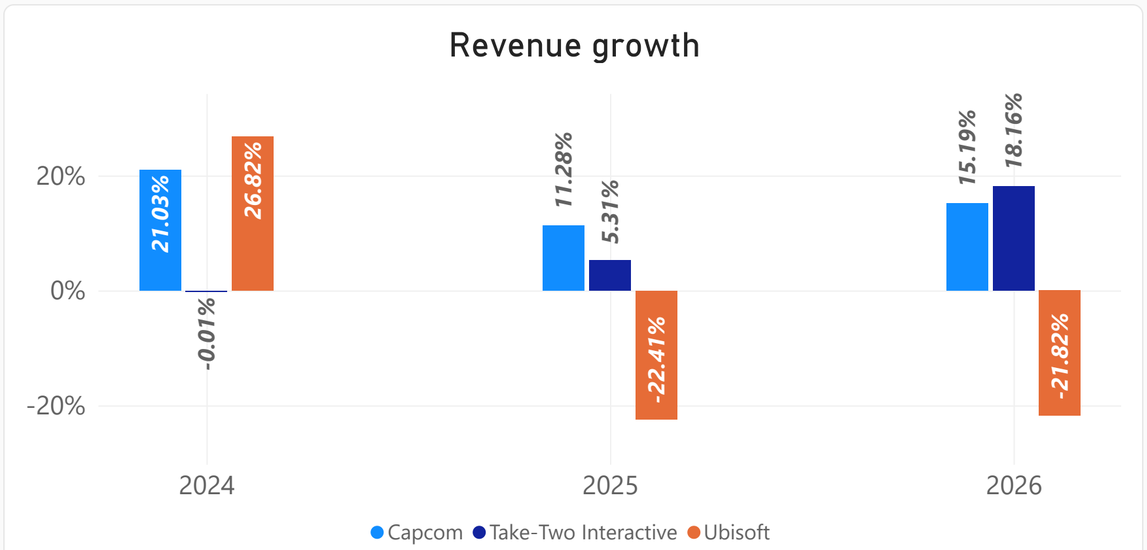

Free cash flow is the fairest comparison across companies, because each records game development spending differently. Capcom's cash lags its profit in heavy development years and catches up in big release years (e.g. 2025, Monster Hunter Wilds). Ubisoft's 2023 capital expenditure (59% of revenue) is unusually high versus its other years and may reflect a reporting change; treat that year's free cash flow with caution.

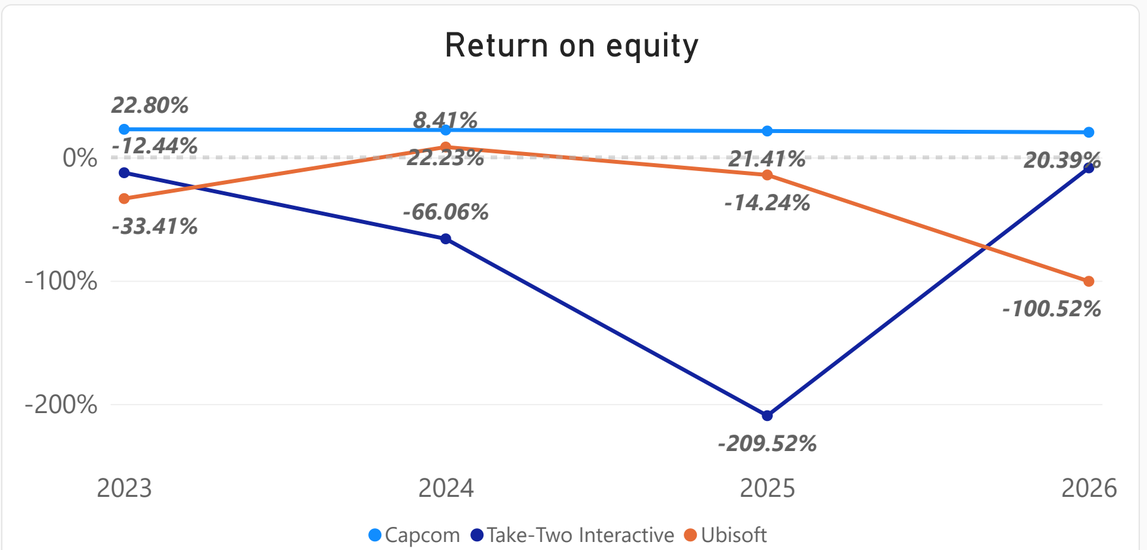

Company name

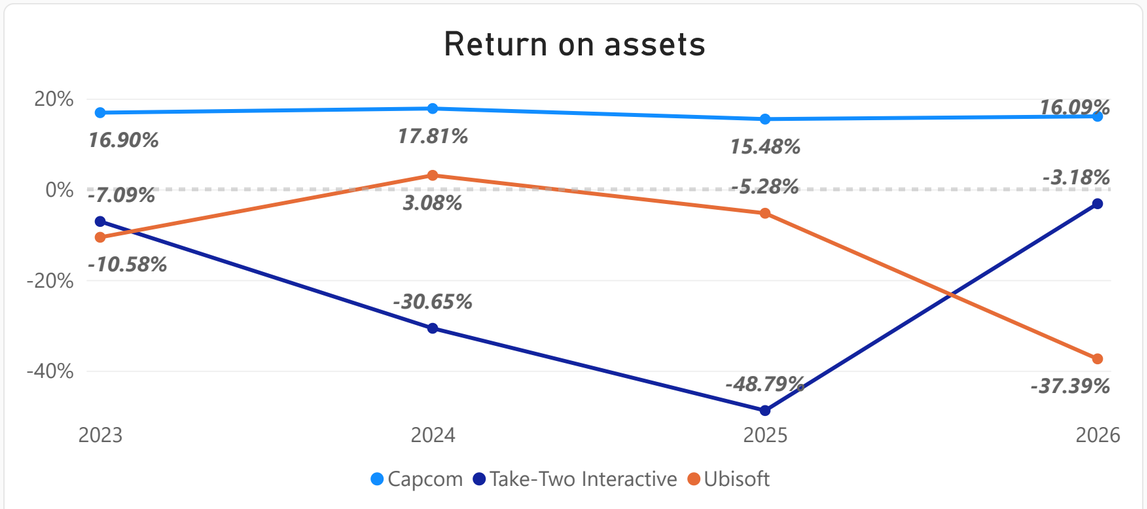

- ○ Capcom
- ○ Take-Two Interactive
- ◉ Ubisoft

Returns & Growth

Are they using their resources well, and growing?

Note on Returns & Growth

ROE and ROA use end-of-year equity and assets. Take-Two's 2025 ROE of -209% is exaggerated because write-offs shrank its equity from $9.0bn to $2.1bn, so the same loss was divided by a much smaller number. Revenue growth is calculated in each company's own currency to exclude exchange rate effects.

Methodology & Notes

Python → Supabase → SQL views → Power BI

Data & method

Data source (Data retrieved October 2026)
Annual financial statements for Capcom (9697.T), Take-Two Interactive (TTWO), and Ubisoft (UBI.PA), FY2023–FY2026, retrieved from Yahoo Finance via the yfinance Python library. All three companies' fiscal years end on March 31, so years are directly comparable.

Pipeline
Python (pandas) for extraction and cleaning → Supabase (PostgreSQL) for storage, with primary and foreign keys → SQL views for ratio calculations → Power BI for the dashboard.

Currency conversion
Amounts are shown in USD where companies are compared by size. Income statement and cash flow items use the average exchange rate over each fiscal year; balance sheet items use the closing rate on the fiscal year-end date. Ratios and growth rates are calculated in each company's own currency, so exchange rate movements don't affect them.

Key definitions
Net debt = total debt − cash (negative = net cash). Current ratio = current assets ÷ current liabilities. Free cash flow = operating cash flow − capital expenditure. ROE = net income ÷ year-end equity. ROA = net income ÷ year-end total assets.

Caveats

- **Gross margin isn't comparable across companies**, because each classifies development and platform costs differently. Operating and net margin are the fairer comparisons.
- **Game development costs are recorded differently.** Capcom (Japanese accounting) records games in development as current assets, which boosts its current ratio and shifts the timing of its cash flow relative to profit.
- **Write-offs drive the largest losses.** Take-Two's and Ubisoft's deepest losses come mainly from write-downs of acquisitions and game development assets, not only from day-to-day operations.
- **ROE uses year-end equity**, which exaggerates results when equity changes sharply, as with Take-Two in 2025.
- **Ubisoft's FY2023 capital expenditure** is unusually high compared with its other years and may reflect a reporting change.
- **Yahoo Finance is an unofficial source.** Key figures were checked for internal consistency, but the companies' annual reports remain the authoritative reference.
